

The NOAA Operational Model Archive and Distribution System NOMADS

Overview and Plans

Glenn K. Rutledge
NOMADS PI

National Oceanic and Atmospheric Administration
National Climatic Data Center

June, 2004

Overview

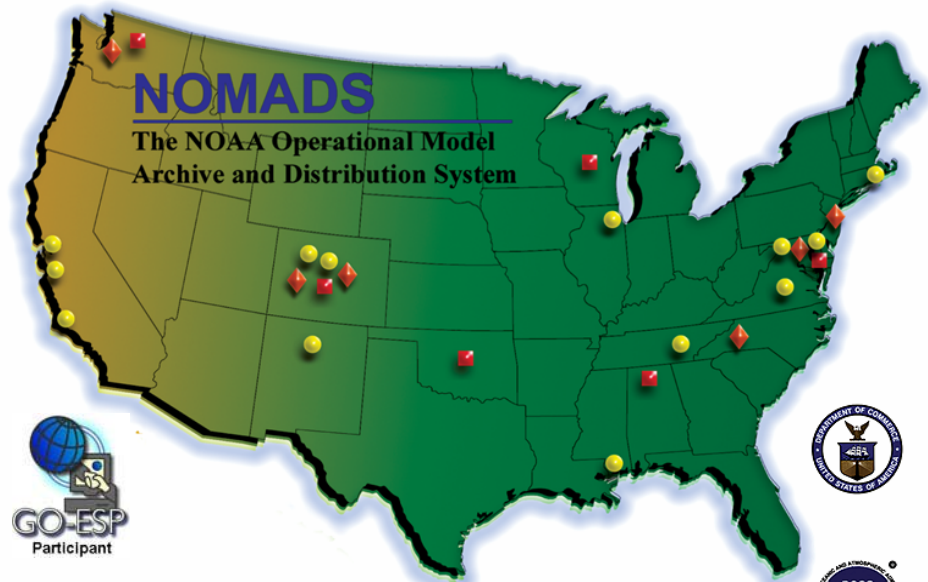

➤ Until now there existed no long-term archive for Climate and Weather models.

➤ University and Institutional research goes largely untapped by NOAA scientists. Effort is wasted on data receipt and format issues with no infrastructure to collaborate.

➤ Retrospective analysis and model inter-comparison are necessary to verify and improve short term NWP models, seasonal forecasts, climate simulations, assessment and detection efforts.

- To overcome this deficiency, some of the Nations top scientists are actively engaged in a grass-roots framework to share data and research findings over the Internet
- NCDC, NCEP and GFDL initiated the NOAA Operational Model Archive and Distribution System.
- NOMADS is a distributed data services pilot for format independent access to climate and weather models and data.

Core NOAA NOMADS Collaborators

- ◆ Climate Diagnostics Center (CDC) Boulder, CO
- ◆ Geophysical Fluid Dynamics Laboratory (GFDL) Princeton, NJ
- ◆ National Climatic Data Center (NCDC) Asheville, NC (Project Lead)
- ◆ National Centers for Environmental Prediction (NCEP) Camp Springs, MD
- ◆ Pacific Marine Environmental Laboratory (PMEL) Seattle, WA
- ◆ NOAA Forecast Systems Laboratory (FSL) Boulder, CO

External Core Collaborators

- Center for Ocean-Land-Atmosphere Studies (COLA) (Maryland)
- Department of Energy's Argonne, Los Alamos, Oak Ridge, Lawrence Berkley, Livermore National Laboratories & Information Sciences Institute (ISI), University of Southern California under the Earth System Grid Project
- National Center for Atmospheric Research (NCAR) Colorado
- Unidata Program Center (UCAR/Unidata) Colorado
- LLNL Program for Climate Model Diagnosis and Intercomparison
- NASA's Global Change Master Directory (GCMD) Maryland
- National Coastal Data Development Center
- University of Rhode Island (OPeNDAP Consortium)

External Collaborators include

- Center for Earth Observing and Space Research (CEOSR), NASA-GSFC Maryland
- George Mason University (NASA SI-ESIP), Virginia
- National Severe Storms Laboratory (NSSL), Oklahoma/SSEC University of Wisconsin
- Universities of Alabama (Huntsville), California (Santa Barbara), Washington & Iowa St.
- National Science Foundation (NSF) CyberInfrastructure

International Participants

- British Atmospheric Data Center, Oxfordshire, United Kingdom)
- UK's Natural Environment Research Council (NERK DataGrid Project)
- Committee for Earth Observing Satellites (CEOS) Grid Project
- Climate Action Partnership (CAP), BOM Australia (US Depts. of Commerce, Energy, State, and EPA)

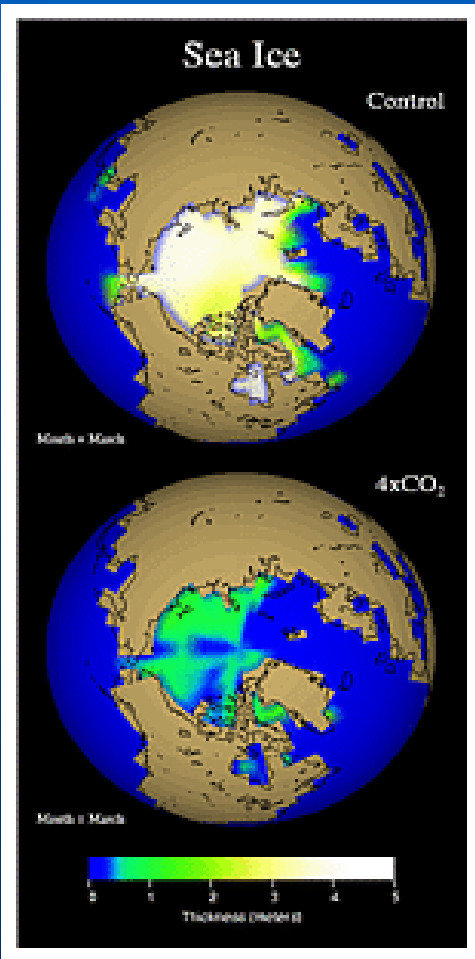

NOMADS

The NOAA Operational Model
Archive and Distribution System

NOMADS Goals

- The goals of NOMADS are to:
 - provide access to models,
 - promote product development,
 - foster research within the geo-science communities (ocean, weather, and climate) to study multiple earth systems using collections of distributed data,
 - expand institutional participation via distributed technologies.

NOMADS

The NOAA Operational Model
Archive and Distribution System

The NOMADS Philosophy

- With NOMADS, users at any skill level will be able to obtain weather and climate information: web browsers to advanced scientific data visualization packages. NOMADS is a flexible approach to data access- promoting standards, based upon what users use most.
- As users require new data types, under NOMADS, they can be added or replaced. Over the years, NOAA has developed several different data conventions and data access protocols. NOMADS allows the use of all these most widely used formats.
- This will allow the users to make better, informed decisions about how nature will impact their future, either in their life, or business decisions.

NOMADS

The NOAA Operational Model
Archive and Distribution System

A Distributed Framework

NOMADS is an agreement between agencies who participate to have common ...

- Data and observation distribution software, format independent and description methods (metadata).
 - Documentation and organizational framework.
 - Forum to plan and organize (science drivers).
 - Funding avenue to direct \$ for intra-Agency partnerships
- ... for university, federal agencies, and organizations, a mechanism to obtain support for the dissemination of their data sets.

NOMADS

The NOAA Operational Model
Archive and Distribution System

Distributed Framework (cont.)

● So What?

“But I just want the Data”

The idea of pulling information, not bytes or data, is new and hard to convey

- NOMADS is a pull technology. Users can become data servers.
- Why transport millions of files if only a subset is needed?
- Will networks ever keep up with growing data sets?
- Data Management at the grass roots level with science driven requirements.
- Many efforts in distributed access. How best to coordinate efforts?
- Vision, planning, and cooperation needed w/ Agency attribution!
- A dynamic system, not over engineered and built upon existing users needs but extensible for future requirements.

NOMADS

The NOAA Operational Model
Archive and Distribution System

Scientific Data Networking?

- The users experience is often frustrating—
 - What data of interest exist?
 - Are they going to be useful to me?
 - How can I obtain them in a usable form?
- Time and effort are wasted on data access and format issues.
- As a result atmosphere/ocean/climate data are under-utilized. Model inter-comparison nearly impossible.

NOMADS

The NOAA Operational Model
Archive and Distribution System

Scientific Data Networking...

NOMADS simplifies scientific data networking, allowing simple access to high volume remote data, unifying access to Climate and Weather models:

- **Data access (client)**
 - Access to remote data in the users normal application
 - IDL / IDV / Matlab / Ferret
 - GrADS (GRIB/BUFR w/ GDS)
 - Netscape / Excel / http (wget)
 - CDAT (PCMDI)
 - **Any netCDF application** (i.e., AWIPS)
 - **Don't need to know the format in which the data are stored.**
- **Data publishing (server)**
 - **Can serve data in various formats**
 - netCDF / GRIB / BUFR / GRIB2
 - HDF (3-5) / EOS
 - SQL / FreeForm
 - JGOFS / NcML
 - DSP
 - ascii, others...
 - **Spatial and temporal sub-setting and host side computations on the fly.**

NVODS / US GODAE / GOOS		Data Provider
Unidata THREDDS, NSDL, DLESSE		Data Provider
WCRP World Climate Research Program		JSC/CLIVAR Briefings

NOMADS

The NOAA Operational Model
Archive and Distribution System

A Bigger Picture

- NOMADS is a founding member of the Group Organized for Earth Science Portal (GO-ESP).
- ESP is a collaboration designed to build the infrastructure needed to create web portals to provide access to observed and simulated data within the climate and weather communities.
- The infrastructure created within ESP will provide a flexible framework that will allow interoperability between the front-end and back-end software components. ESP is an international collaboration involving software developers from both Europe and the United States. See <http://esportal.gfdl.noaa.gov/>

NOMADS

The NOAA Operational Model
Archive and Distribution System

Uses

- Climate model output and observations are vital to providing timely assessments of climate change and impacts.
- Collaboration between Global Climate Model (GCM) and NWP researchers using large data volumes of data.
- Assess the affect of inadequate spatial and temporal sampling.
- Models can be used to guide the spatial and temporal sampling frequency for observing network design and operation to resolve distributions for specific variables.
- Accurate estimates of future climate variability and trends.
- Long-term protection of climate simulations and NWP analysis.

NOMADS

The NOAA Operational Model
Archive and Distribution System

Uses (cont.)

- NOMADS promotes systematic model evaluation and model inter-comparison; and a feedback mechanism from research to operations.
- Departure of observations from NWP and a fixed reference climatological background can help identify time-dependent changes in the observations.
 - A Numerical Weather Prediction (NWP) re-run capability. Model input Data Assimilation fields for Regional model initialization (e.g., WRF, MM5,) and Climate Models.
 - Analysis of historical NWP for operational forecaster training.
 - Third-world internet access to NWP for forecasting operations.
 - Subsets of high volume NWP and GCM avbl over the Internet.

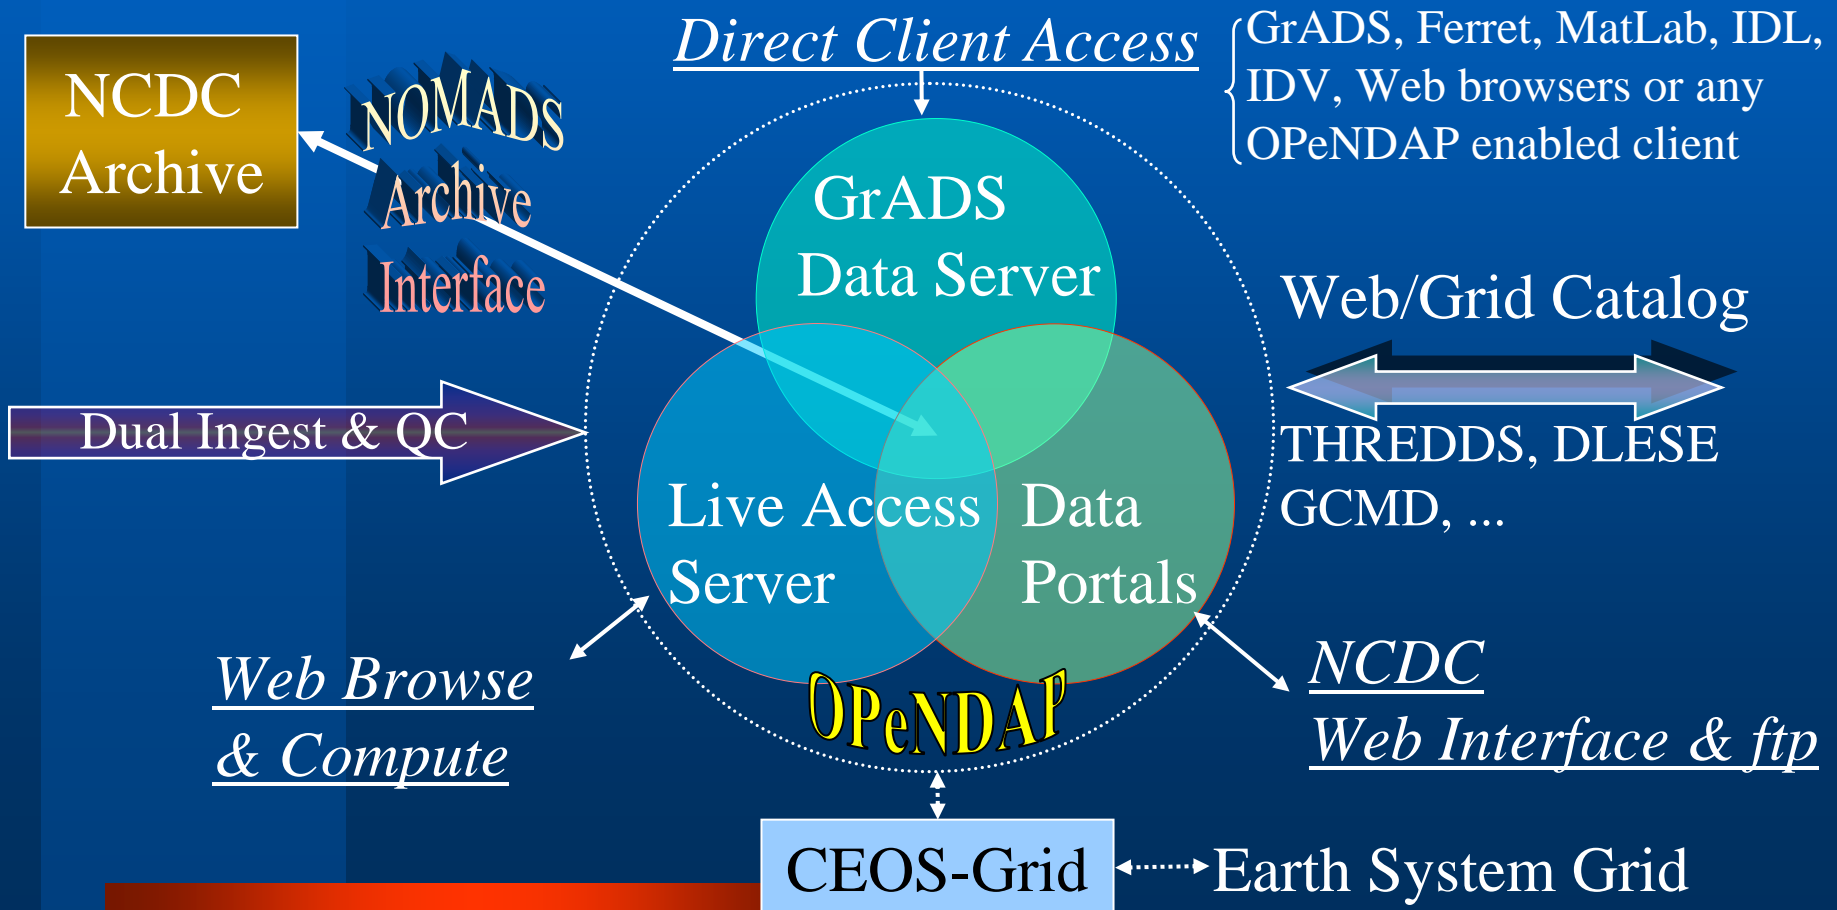

NOMADS

The NOAA Operational Model
Archive and Distribution System

The NOMADS Philosophy

Multiple paths to format independent data access:

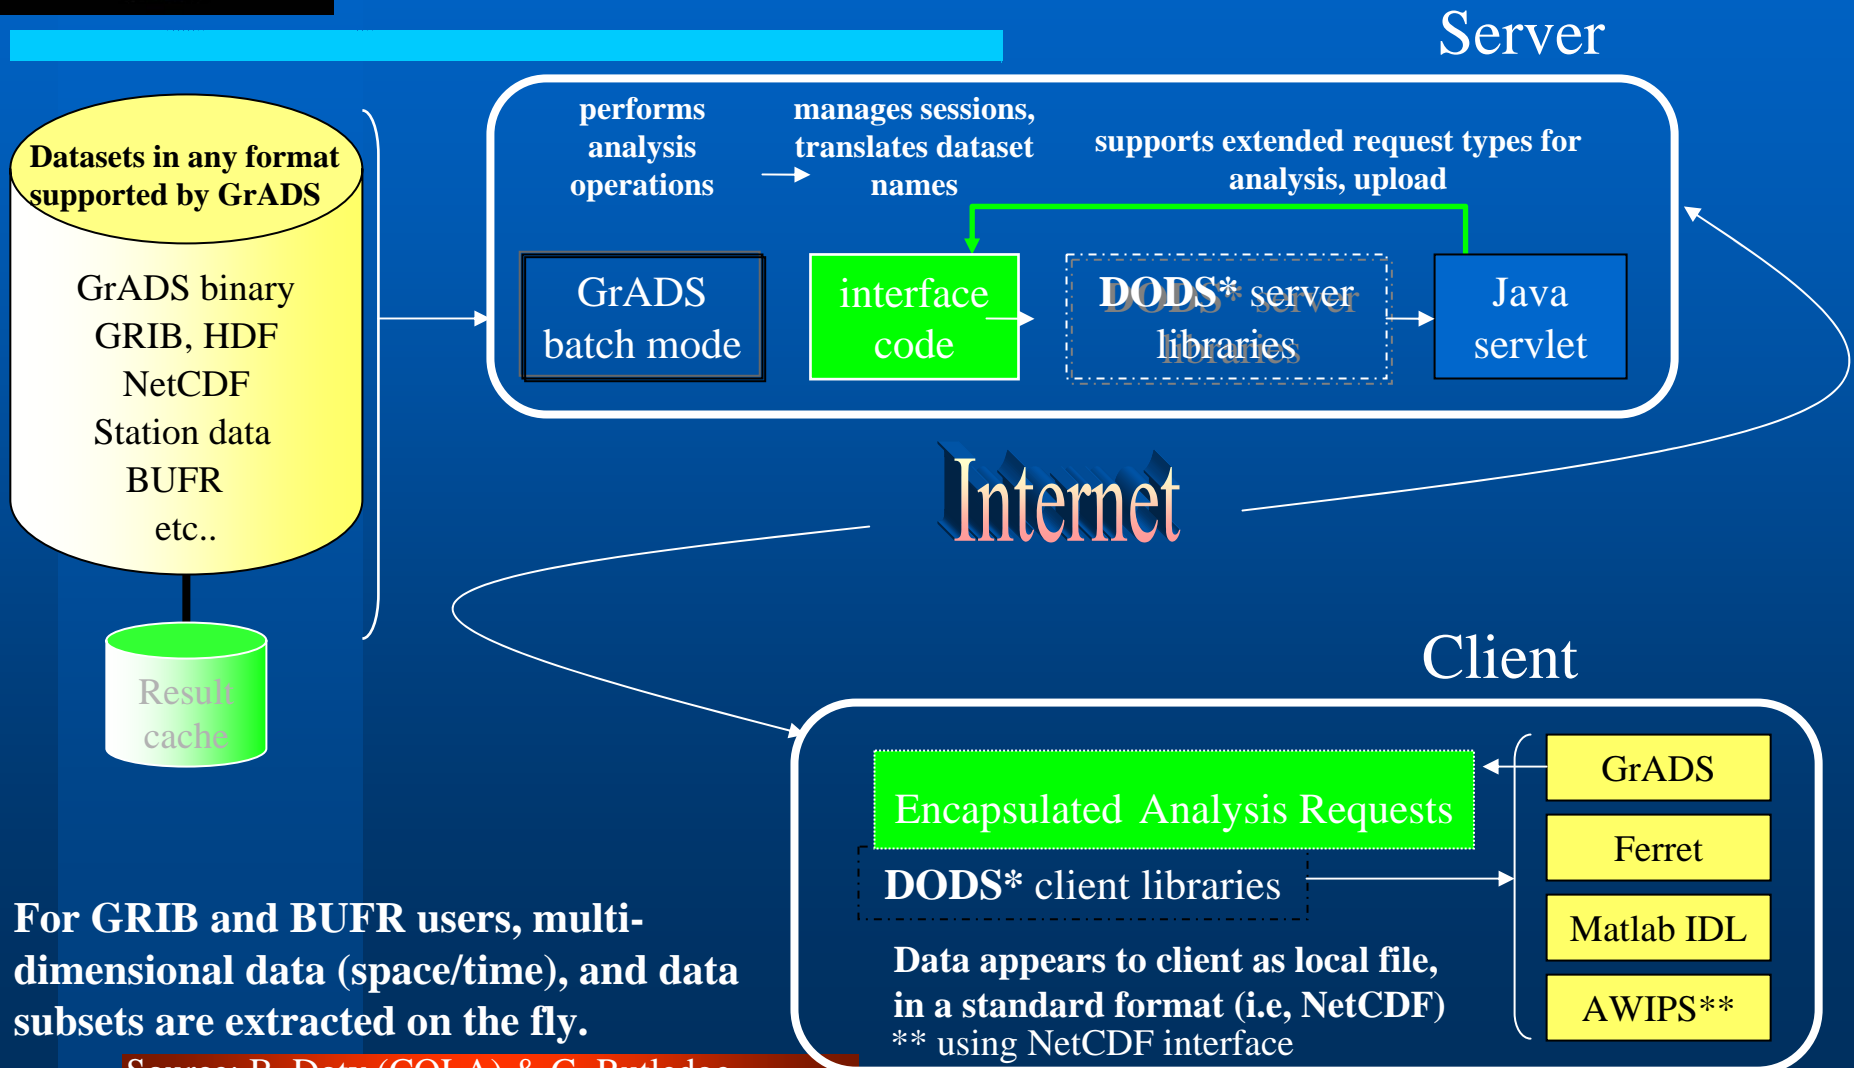

NOMADS

The NOAA Operational Model
Archive and Distribution System

GrADS Data Server- GDS

Source: B. Doty (COLA) & G. Rutledge

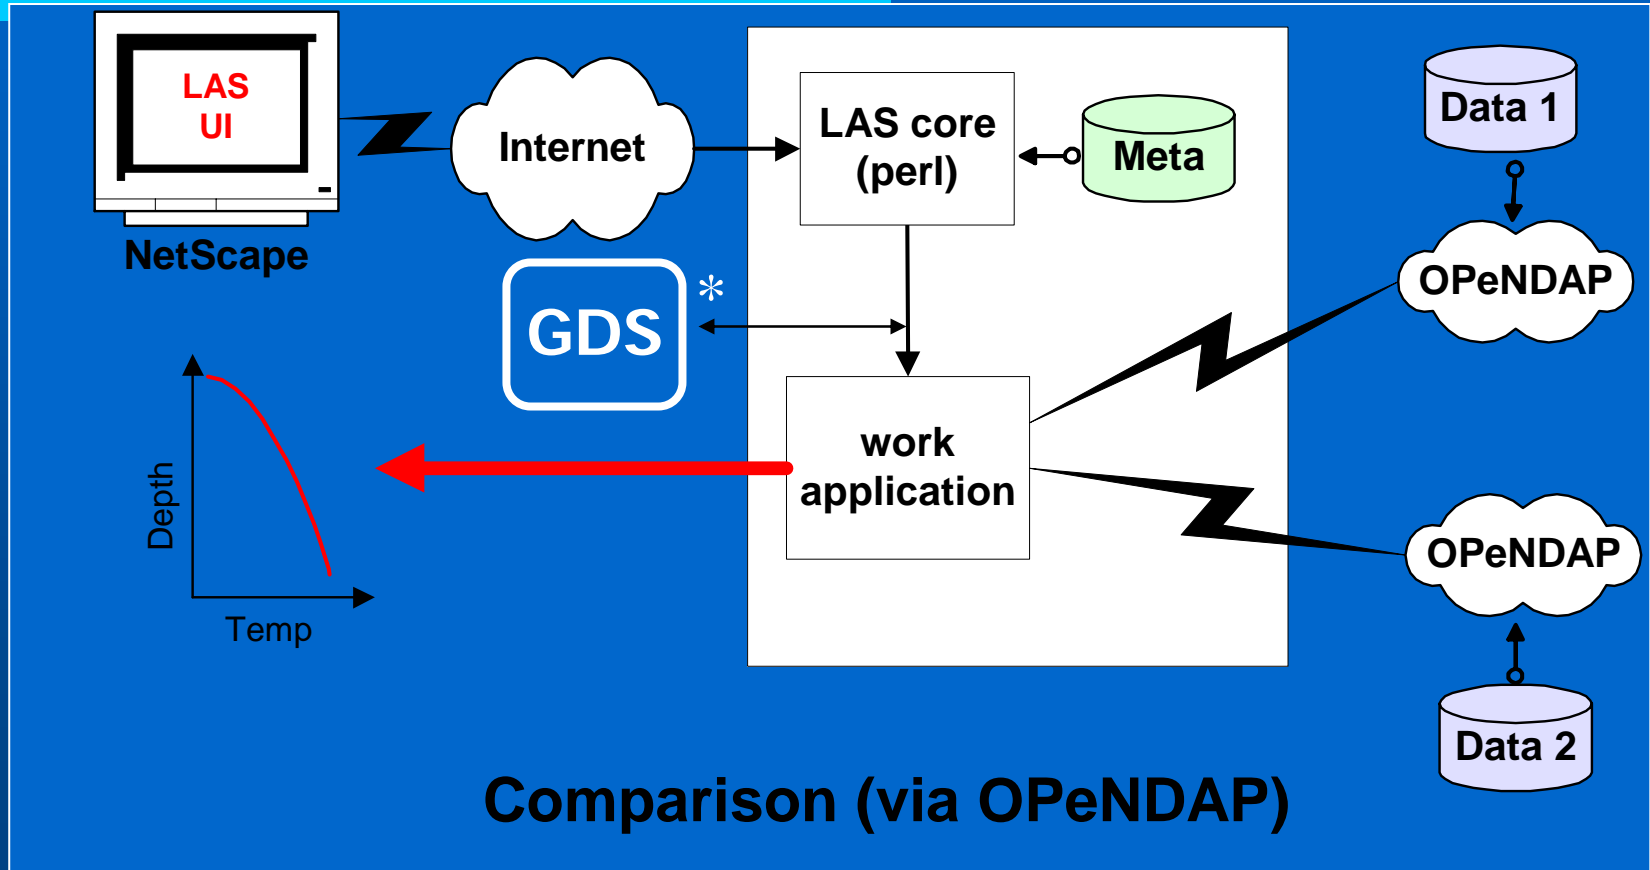

NOMADS

The NOAA Operational Model
Archive and Distribution System

Proposed NCDC Install of LAS

* GOAL: Retrieving and Using GRIB/BUFR through GDS and LAS

NOMADS

The NOAA Operational Model
Archive and Distribution System

Framework

- NOMADS uses the Open Source XML based OPeNDAP.
- OPeNDAP is a binary-level protocol designed for the transport of scientific data subsets over the Internet. Provides server side data manipulation on-the-fly (e.g., GrADS-DODS).
- Data formats: GRIB, GRIB2, BUFR, HDF, NetCDF, ascii...
Conventions: COARDS, CF, FGDC, DIF....libraries built as necessary.
- APIs: JAVA-OPeNDAP, C++-OPeNDAP, NetCDF, GRIB, BUFR, THREDDS, Python.

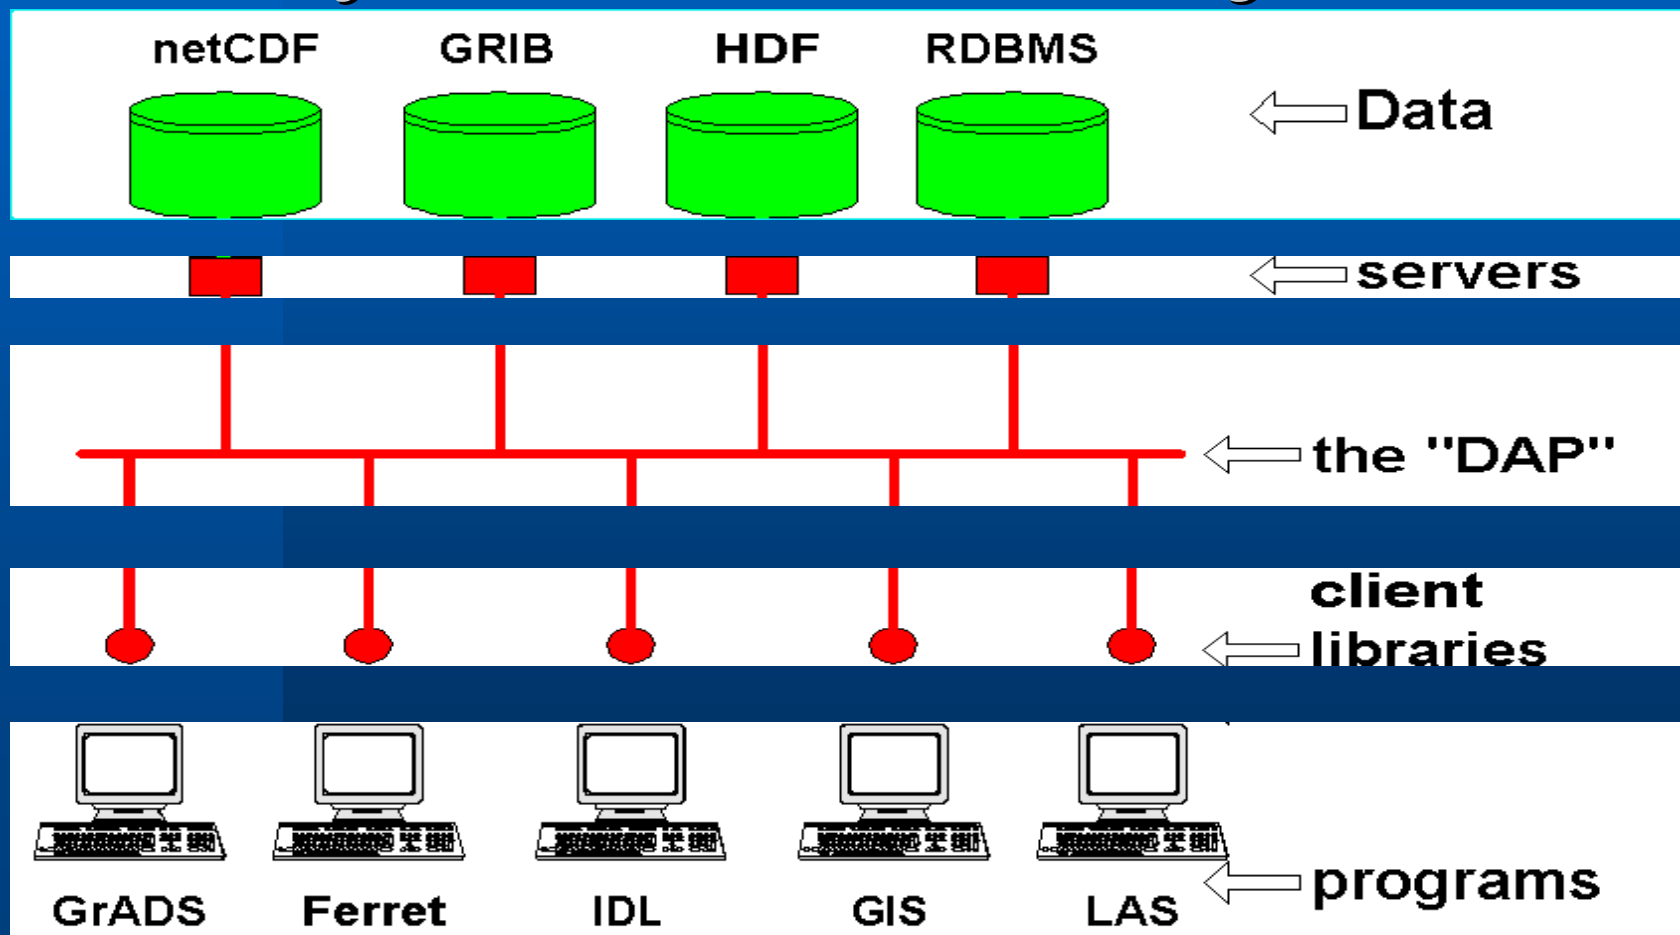

NOMADS

The NOAA Operational Model
Archive and Distribution System

Framework (cont.)

Utilize Binary data and metadata through OPeNDAP ...

NOMADS

The NOAA Operational Model
Archive and Distribution System

Data Availability Overview

CDC: Reanalysis, climate weather models, in-situ

GFDL: Coupled Models, Control and Perturbation
Integrations and historical 20th century simulations
using solar, volcano, GHG and aerosol forcings.

FSL: MADIS mesoNets, Hi-Res RUC-II

NCAR: Community Climate System Model / Land Surface
CO2 predictive models (VEMAP), Reanalysis / Eta

NCDC: Archive for NCEP model input/output / Select NCDC
Observation datasets, Ocean/Ice WAVE, NARR, SST's...

NCEP: Real-time Input/Output, Reanalysis (I&II), Ensembles, Sea
Ice Ocean, CDAS, Hourly Eta, Climate Forecast Models...

LLNL: AMIP / Probabilistic information

PMEL: Ocean and Climate datasets

NOMADS

The NOAA Operational Model
Archive and Distribution System

NCDC and NCEP Data

- **NCDC NOMADS Archive**
 - NWP from NCEP
 - POR: 2002 to Real-Time
 - **Eta** (12km); **GFS** (1 degree); **GDAS**; **NARR** 12km 30yrs
 - RUC-II 20/40km; Ocean and Ice WAVE Models
 - NCDC Reference Data Sets (Reynolds SST's, GHCN...)
 - NCDC Mirror site to NCEP NOMADS for Eta & GFS
- **NCEP Real-Time NOMADS**
 - Global Forecast System GFS 1 degree
 - **Hourly Eta** at 12km
 - Regional Spectral Model (RSM) and Ensembles
 - Climate Data Assimilation System (CDAS)
 - AMIP Climate Monitoring, Climate Forecast Model
 - NCEP/NCAR Global Reanalysis 1&2

NOMADS

The NOAA Operational Model
Archive and Distribution System

Model Input: NCEP GDAS

- NOMADS saves the minimum data necessary to regenerate model output products as close as possible to NCEP operations.
- The analysis files will be in the models own coordinate system.
- Files are constructed with computer and computational efficiency in mind, and not in standard coordinate systems.
- Programs to convert these files are available upon request:
 - spectral to gaussian
 - gaussian to lat/lon
 - sigma to pressure

NOMADS

The NOAA Operational Model
Archive and Distribution System

NCEP GDAS (cont.)

- The minimum set for Global Spectral Forecast Model and the Spectral Statistical Interpolation Cycling Analysis System contains ~0.5Gb /run:
 - NOAA-15/16 AMSU-A/B TOVS 1B Radiances (IEEE)
 - Analysis Bias Corrected Information / Obs Toss List
 - SFC U/A, ACRS, Aircft (BUFR)
 - 6HR fcst guess from previous run (BUFR)
 - ERSCAT Sat obs / HIRS 14/15, MSU TOVS (IEEE)
 - Guess prep and and fcst guess output (BUFR)
 - Analysis ready QC'ed Obs. (prepBUFR)
 - Profiler, TOVS, Wind Obs. (BUFR)
 - SFC Analysis Restart Files
 - SST's (GRIB), Radar VAD Winds (BUFR)

NOMADS

The NOAA Operational Model
Archive and Distribution System

NOMADS Archive and Users

- **Data Philosophy and Retention**

- Data are free.
- NWP forecast data are retained for five years.
- Analysis, Reanalysis, observations, and GDAS model input are retained for long term stewardship.

- **Data Users**

- Resolution of IP addresses indicate a broad range, and consistent use of NOMADS available data:
 - U.S. Agencies, Academic Institutions: K-12 to Research
 - International governments, (Italy, Japan, countries within South America and Africa. Many others).
 - Private Sector and Non-Government Organizations NGO's
 - World Bank, United Nations (FAO), others.

Spotlight on NOMADS

NOMADS is being developed as a Unified Climate and Weather Archive to provide Web access to model information so that users can make decisions about their specific needs. This spans time scales from days (weather), to months (El Nino), to decades (global warming). For more, see NCDC's [nomads](#) page.

Spotlight on ESP

The Earth Science
Portal (ESP) is a

[gfdl's home page](#) > [products and services](#) > data portal

gfdl's data portal

Our Data Portal Services

Public data sets from GFDL are made available through the GFDL Data Portal. The data portal is designed to provide access to: data attributes, and graphical display the data. Download provides "http" access to download complete files. Display of data attributes includes global attributes and the variables available in the files. Graphical display uses the Live Access Server to graphically display the data.

Our Public Data Files

Registration for the GFDL Data Files is free. Users are requested to complete the Registration Form for Public Data Files (found on the GFDL Data Portal) before they first begin using the data portal. Information from this form will be used to provide registered users with news on when additional data files are added, and when corrections are made to existing public data. The information gathered will not be used for any purposes other than to provide the Data Portal Services.

Data Storage

The data files on the data portal are stored in netCDF (network Common Data Form), and can be identified by the suffix ".nc". The data files are also available in the GFDL's netCDF format, and can be identified by the suffix ".nc". More information about netCDF is available on the GFDL Data Portal.

Other Portals: NCAR

The Community Data Portal (CDP) is a collection of earth science datasets from NCAR, UCAR, UOP, and participating organizations in the following research areas:

- oceanic
- atmospheric
- space weather
- turbulence

NOMADS

The NOAA Operational Model
Archive and Distribution System

Next Steps

- GDAS Availability: NOMADS can now handle BUFR (thanks to COLA).
- North American Regional Reanalysis (NARR). Ingesting from NCEP. NOMADS servicing.
- NCDC NOMADS to archive/service new proposed NOAA Reanalysis (CDC/CPC/NCDC).
- AWIPS looking into NOMADS:
 - Phoncon: FSL indicates next AWIPS will be OPeNDAP enabled.
 - FSL drafting Grid white paper to NOAA CIO (NOMADS part of the mix).
 - NOMADS to brief NOAA. Request NCEP and GFDL Participation.
- “Operationalize”
 - Move NOMADS services into the TOC?
- Advance into Climate analysis and detection efforts
 - Science based user workshops and projects needed.
- Backfill GFS & Eta to 2000. Currently 2002 to present.

Next Steps (cont.)

- WMO has requested NOMADS overview/white paper. (in preparation).
- Adequate metadata for open access for NWP and GCM. Groups working the GCM but need NWP model metadata development.
- Google like search engine through ESP community.
- Data Management and Science oversight at NCDC, NCEP, and GFDL to advance, support, and coordinate various OPeNDAP projects:
 - allows climate / ocean / weather model inter-comparison and access.
 - Support software development institutions (e.g, COLA, PMEL, OPeNDAP).
- Do not over engineer this process. Build on simple successes with existing efforts including a new NOMADS capability within CLASS & thru Scientific Data Stewardship (SDS).
